DETAILED ACTION

Election/Restrictions

Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 1-10 and 12-17, drawn to a nucleotide sequence comprising a) SEQ ID NO:3, b) a sequence which hybridizes to SEQ ID NO:3, c) a sequence which has at least 80% homology with a) or b), or d) a sequence which is a fragment of a), and drawn to a vector, plant cells, a plant, seed, and a method for producing a plant with gametophytic male sterility with inducible fertility.

Group II, claim(s) 11, drawn to a seed obtained by crossing a plant having agronomic value with a plant which has gametophytic male sterility with inducible fertility and comprises a gene encoding a male-gamete-specific cytotoxic product.

The inventions listed as Groups I-II do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons:

Groups I-II are not linked by the technical feature of Group I, a nucleotide sequence comprising a) SEQ ID NO:3, b) a sequence which hybridizes to SEQ ID NO:3, c) a sequence

Art Unit: 1638

which has at least 80% homology with a) or b), or d) a sequence which is a fragment of a).

Additionally, this technical feature of Group I is obvious or anticipated over any of EMBL Accession No. D88192 (10 July 1997, Applicant's Search Report), D88193 (10 July 1997, Applicant's Search Report), or AB005238 (18 July 1997, Applicant's Search Report), and therefore does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art. The technical feature linking the inventions of Groups I-II appears to be a plant having gametophytic male sterility with inducible fertility comprising a gene encoding a male-gamete-specific cytotoxic product. However, a plant having gametophytic male sterility with inducible fertility comprising a gene encoding a male-gamete-specific cytotoxic product is obvious or anticipated over either of WO 96/16182 (30 May 1996, Applicant's Search Report) or WO 90/08828 (09 August 1990, Applicant's Search Report), and therefore does not constitute a special technical feature as defined by PCT Rule 13.2, because it does not define a contribution over the prior art.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
